

Danrley Pereira

Founder & Full-Stack Software Engineer — AI, Backend & Product

danrley.pereira@dwcorp.com.br • +55 61 9 9423-4712 • Brasília, Brazil • LinkedIn • GitHub • danrleypereira.com

SUMMARY

Full-stack software engineer since 2017 and founder of DW Corp, building **AI-enabled products end to end** — LLM agents, RAG pipelines, and machine learning — on a strong Python, C#/.NET, and Node.js backend. I have shipped AI features to real customers, built **reusable product foundations** (authentication, payments, CI/CD, cloud and on-premise infrastructure), hired and mentored engineers, and lead Brasília's first **Software Craftsmanship** community. I own the full path from data and retrieval to backend services and the web interfaces that deliver them, and I have deep experience in operational and logistics software.

CORE SKILLS

- **AI / ML:** LLM APIs (OpenAI, Anthropic, Azure OpenAI), RAG & embeddings, FAISS, LangChain / LangGraph, agentic workflows, prompt engineering, TensorFlow / Keras, reinforcement learning.
- **Backend:** Python (FastAPI, Flask, Django, Celery), C#/.NET & ASP.NET, Node.js, Rust, RESTful APIs, event-driven architecture (RabbitMQ), microservices.
- **Frontend:** React, Next.js, Vue / Nuxt, Angular, TypeScript.
- **Data:** PostgreSQL, SQLAlchemy, MySQL, MongoDB, Redis, Snowflake, ETL / data pipelines, Pandas.
- **Cloud & DevOps:** Docker, Kubernetes, AWS, GCP, Azure, CI/CD (GitHub & GitLab), Terraform, Grafana, on-premise / bare-metal Linux.
- **Testing:** Pytest, Playwright, Cypress, Cucumber, Behave, Allure, TDD / BDD.

EXPERIENCE

Founder & AI Engineer — DW Corp

Sep 2022 – Present

- Built **LangChain / LangGraph agents** — a WhatsApp budget assistant and an event-driven multi-agent bus — behind a common multi-provider LLM interface.
- Built **Curupira**, a reusable Rust/OIDC authentication platform (multi-tenancy, SSO, MFA), plus payment integrations (Stripe, Adyen) and a bare-metal + hybrid-cloud stack with Terraform and Grafana.
- Delivered client products: a restaurant-orders manager (Django, Celery, circuit-breaker resilience to a data lake) and a .NET MAUI field-service app with database procedures, views and triggers.
- Hired and mentored 10+ engineers, and lead Brasília's first Software Craftsmanship community (TDD katas, round tables).

Senior Software Engineer — Epicor

Nov 2023 – Mar 2025

- Integrated **Azure OpenAI** and a **RAG pipeline** over proprietary company data; used Azure Document Intelligence for structured extraction.
- Built **.NET Aspire** microservices with **RabbitMQ** event-driven processing, custom OAuth2/SAML, deployed on Kubernetes.
- Led an Angular integration portal refactor into microfrontends, with strong xUnit and end-to-end coverage, and drove sprint-planning and documentation.

Researcher — Ibict / MCTI (federal government)

Mar 2025 – Present

- Built **Snowflake** data pipelines over institutional data, driving progress toward training ML models on proprietary data.
- Co-advised an undergraduate thesis that designed a **RAG system** for the Brazilian judiciary (graded 9.0/10); audited a 600K+-user platform against ISO/IEC 25000 and LGPD.

Senior Full-Stack Consultant — SubSurface Dynamics

Jan 2024 – Jun 2024

- Refactored a MERN app into a modern **TypeScript** project on **Fastify**, **Socket.io**, **Redis** and Typegoose, serving thousands of users in real time.
- Tuned Redis and MongoDB Atlas time-series for cost and performance; secured the platform with Azure AD (ADAL) + Auth0 (OAuth2/SAML).
- Built 2D/3D charts and a **Three.js** wellbore visualization, plus dark mode and a notification system.

Data & DevOps Engineer — Dado Global

Dec 2021 – Apr 2023

- Designed an **ETL** system with layered responsibilities using **SQLAlchemy** and rigorous pytest coverage; automated extraction with Selenium and Behave.
- Moved delivery to **Continuous Delivery** on GitHub Actions (weekly → daily), improving SLA from 70% to 95%.

Software Engineer — ClearSale

Nov 2021 – Mar 2022

- Built high-performance anti-fraud microservices in **C#/.NET**; designed database views, triggers and stored procedures and optimized queries with Dapper.
- Outlined engineering processes (UML/BPMN), initiated unit testing, and mentored teammates.

Technical Lead & Researcher — LabTech, UDF

Jan 2023 – Dec 2023

- Led a multi-tier event-management platform (React, Python, Spring Boot, RabbitMQ, Kubernetes) and mentored junior engineers.

Software Engineer — Layers Education

Mar 2022 – Sep 2022

- Maintained backend and microfrontend systems; cut MongoDB query times from 1.3s to 0.6s under load, built a BigQuery data lake for ETL, and hardened security to OWASP.

Full-Stack Engineer — Compuetra

Jul 2020 – Aug 2021

- Built **transport, delivery and yard-management** logistics software with fleet and **vehicle-inspection** systems, and an ERP desktop platform (Electron) on PostgreSQL.
- Migrated a legacy AngularJS vehicle-tracking app to React (on-premise), and built a commercial page generator with a PCI-compliant checkout driven from the database.

Full-Stack Developer & BPM — ConsultMídia / Bank of Brasília

Apr 2020 – Jan 2021

- Built AngularJS/Spring Boot interfaces and REST APIs on **Camunda** BPM to modernize the bank's workflows; integrated Alfresco (document management) and automated performance tests (JMeter, Selenium).

Full-Stack & Mobile Developer — Transoft

Feb 2021 – Oct 2021

- Built and revamped applications managing sensors and cameras for bus fleets, and a mobile staff-management app integrated with Oracle (Angular, Ionic, Laravel).

Platform Developer — Ministry of Health / USP

Jun 2019 – Jul 2020

- Helped the Ministry of Health manage **medicine distribution across 5,000+ municipalities**; built the frontend and integrated REST APIs and microservices to surface data, reduce fraud and streamline service integration.

EARLIER EXPERIENCE

- **Taurus Software** — IoT energy-management, hybrid mobile (Ionic) and lead-capture marketing applications. *2018–2020*
- **Gama Cidadão** — Web & Digital Marketing Manager; WordPress/Vue portals, landing pages, and SEO. *2017–2018*
- **UMESB** — Contract developer (student-registration system, Polymer/Node.js). *2017*
- **IT Universe** — Instructor in web/graphic design and computing fundamentals. *2017*

EDUCATION

- B.Sc. Software Engineering — University of Brasília
- B.Sc. Computer Science — University Centre of Federal District
- MBA, Supply Chain & Integrated Logistics — Southern Cross University
- MBA, Database Administration — Anhanguera

CERTIFICATIONS & SPEAKING

- Main-stage speaker at **Campus Party Brazil** — Clean Architecture, TDD, AI, SDET & Software Craftsmanship.
- Business Intelligence with Power BI • Scrum Fundamentals (SFC) • Kanban Foundation • Oral Production B2 (English) — UnB.

LANGUAGES

Portuguese (native) • English (C2) • Spanish (intermediate)
