INTRODUCTION

Founder-minded, end-to-end product engineer and technical strategist with 8+ years building and modernizing **B2B, operational, and data-intensive products** across startups, international companies, and government. I work across the whole stack — from product discovery and **relational data modeling** to **Python APIs, real-time workflows, React/Next.js** interfaces, automated testing, CI/CD, and cloud or on-premise infrastructure.

As the founder of **DW Corp**, I build reusable product foundations — authentication, payment integrations, deployment automation, and hybrid infrastructure — while hiring and mentoring engineers and shaping product and go-to-market decisions. I am looking to partner closely with a hands-on founder, challenge assumptions, own technical direction, and turn complex operational workflows into reliable software.

WHY I'M A STRONG FIT

- **Founder mindset, not ticket execution:** I have repeatedly initiated architecture, process, product, hiring, and infrastructure — the constituent responsibilities of a first engineer whose standards become the team's standards.
- **0-to-1 builder:** I take products from idea to production and operate them — reusable auth, payments, CI/CD, and infrastructure that shorten the path to launch.
- **The target stack, hands-on:** Python & FastAPI, SQLAlchemy & Alembic on PostgreSQL, WebSockets/Socket.io, Next.js, and thorough unit/integration testing across production systems.
- **Real-time operational systems:** designed live monitoring and streaming workflows on Socket.io + Redis serving thousands of users — directly relevant to production-run visibility.
- **Supply-chain & logistics domain:** delivered procurement/ERP software (Epicor), transport, delivery and yard management (Compuetra), and hold an **MBA in Supply Chain & Integrated Logistics** — I understand software where data consistency and visibility drive physical operations.
- **Availability & collaboration:** available to focus full-time and to work in person with the founder in any Brazilian capital (open to travel). Railway is new to me, but Heroku, AWS, GCP, and on-premise/bare-metal operation transfer directly.

CORE TECHNOLOGIES

Python • FastAPI • Flask • SQLAlchemy • Alembic • PostgreSQL • React • Next.js • Nuxt • TypeScript • WebSockets/Socket.io • Redis • Celery • RabbitMQ • Docker • Kubernetes • Terraform/OpenTofu • GitHub & GitLab CI/CD • AWS • GCP • On-Premise/Linux • Pytest • Playwright • Cucumber • Bruno • k6

EDUCATION

B.Sc. Software Engineering

University of Brasília

📅 2015 - 2017

📍 Brasília, DF

B.Sc. Computer Science

University Centre of Federal District

📅 2022 - 2025

📍 Brasília, DF

Systems Analysis & Development

University Centre of Federal District

📅 2020 - 2021

📍 Brasília, DF

MBA — Supply Chain & Integrated Logistics

Southern Cross University

📅 2024 - 2025

📍 São Paulo, SP

MBA — Database Administration

Anhanguera

📅 2024 - 2025

📍 São Paulo, SP

LANGUAGES

Portuguese — Native

English — Advanced (B2+)

Spanish — Intermediate (*learning*)

German — Beginner (*learning*)

EXPERIENCE

Founder & Principal Product Engineer

DW Corp LTDA

📅 Sep 2022 - Present

📍 Brasília - Brazil

I founded DW Corp to build reusable product capabilities and operate across engineering, product, hiring, and go-to-market — an intentional effort to be able to launch and run products end to end.

Reusable Product Foundations

- Built **Curupira**, a Rust/axum **OAuth2/OIDC authorization service** with **multi-tenancy**, **SSO federation**, MFA, PKCE/JWKS, Argon2 password hashing, GDPR erasure, and OpenTelemetry observability, plus a Nuxt SSR admin dashboard — a drop-in identity layer that cuts new-product setup time (built for ~US\$12k over 5 months; beta users in production).
- Integrated payments with **Stripe**, **Adyen**, and Brazilian providers; previously ran **Auth0** and built custom identity layers for other companies.
- Delivered DW Corp's digital presence (**Next.js 14** App Router + Django/Wagtail CMS, i18n, standalone Docker) for ~US\$5k across ~10 months.

Infrastructure, CI/CD & Observability

- Set up a full **bare-metal 3-node cluster** with hybrid cloud/on-premise deployment; standardized CI/CD across **GitHub and GitLab** (self-hosted and hosted runners) and infrastructure-as-code with **Terraform/OpenTofu**.
- Operate **Grafana** dashboards, alerting, and monitoring agents (including security-breach detection) across software and infrastructure.

Team, Mentorship & Product

- **Hired and managed 5 people** (3 engineers, 1 marketing, 1 part-time psychologist for ~1 year); **mentored 10+ engineers** over four years — 5 already at mid-level — and lectured at tech events for hundreds of attendees.
- Lead **Brasília's Software Craftsmanship community** (the first in Brazil), championing testing and engineering standards with Playwright, Cucumber, Behave, Allure, Bruno, and k6.
- Own product discovery, positioning, marketing, and build-vs-buy decisions — balancing delivery speed with maintainable architecture.

CORE SKILLS

Languages

Python, C#, TypeScript, JavaScript, SQL, Rust

Backend & APIs

FastAPI, Flask, Django, .NET Core, Node.js/Express, SQLAlchemy, Alembic, RESTful design

Frontend

React, Next.js, Nuxt, Vue, Angular

Data & Storage

PostgreSQL, MySQL, MongoDB, Redis, Snowflake, Pandas

Real-time & Messaging

WebSockets / Socket.io, RabbitMQ, Celery, Bull, SQS

Infrastructure & DevOps

Docker, Kubernetes, Terraform / OpenTofu, GitHub & GitLab CI/CD, AWS, GCP, Linux & Bare-metal, Grafana

Testing

Pytest, Playwright, Cypress, Cucumber, Behave, Allure, Bruno, k6, TDD

AI (secondary)

LLM APIs (OpenAI, Anthropic), RAG, LangChain, TensorFlow

EXPERIENCE

Senior Software Engineer

Epicor

📅 Nov 2023 - Mar 2025 📍 Austin TX - USA

Built an **AI-assisted procurement / RFQ sourcing and purchase-order automation** module **connected to the real Epicor Kinetic ERP** (buyers, suppliers/vendors, RFQs, quotes, price breaks, POs) via Epicor's event-driven Data Fabric.

- Designed **.NET Aspire** microservices with **RabbitMQ** producers/consumers over versioned event contracts, integrating the module with live ERP supply-chain data.
- Implemented custom **OAuth2/SAML** auth in .NET with JWT; deployed on **Kubernetes**; led a refactor of an Angular integration portal into **microfrontends**.
- Built abstract, SOLID-compliant solutions with .NET Results/Generics and reactive functions, reducing try-catch reliance and improving observability.
- Delivered strong test coverage — xUnit unit & integration tests plus WebdriverIO E2E — through Azure DevOps CI/CD pipelines.
- Drove sprint-planning and process improvements, unblocked the frontend team by anticipating API dependencies, and authored onboarding documentation.
- Integrated **Azure OpenAI** with Azure Document Intelligence to extract structured quote data from supplier emails/attachments (a supporting capability of the product).

Technologies: .NET, .NET Aspire, C#, Angular, RabbitMQ, Azure (Cosmos DB, Key Vault, Document Intelligence, OpenAI), OAuth2, SAML, JWT, Kubernetes, Microfrontends, xUnit, WebdriverIO, Azure DevOps.

Full-Stack Engineer & Consultant

DW Corp — Client Engagements

📅 2023 - Present 📍 Remote

Structured Finance / CMBS — Built **FastAPI** ingestion services feeding a **Snowflake** lakehouse (external stages, partitioning, 18 materialized views) through an event-driven **AWS SQS** pipeline over CREFC-standard financial data; React/Vite frontends. Researched cross-source **data federation and centralization**.

Healthcare / Life-Sciences Analytics — Built and evolved a clinical-trial planning platform on **Flask + SQLAlchemy 2.0** with **~140 Alembic migrations** over a complex **PostgreSQL** schema (a *Plan* aggregate spanning 33 tables, 71 relationships, and 50 foreign keys, with many-to-many and self-referential relations). Tuned queries with connection pooling and a functional index; ran async projection compute on **Celery + Redis**; maintained **~200 pytest integration tests** against a real Postgres.

Technologies: Python, FastAPI, Flask, SQLAlchemy, Alembic, PostgreSQL, Snowflake, AWS SQS, Celery, Redis, Pytest, React, Vite.

LICENSES & CERTIFICATIONS

Campus Party Brasília — Lecture: reducing costs with Fedora On-Premise; Arduino Workshop Facilitator

📅 2023 📍 Brasília, Brazil

Business Intelligence with Power BI — ENG DTP

📅 2019 📍 Brasília, Brazil

Kanban Foundation

📅 2020 📍 Brasília, Brazil

Credential ID: 45878364

Scrum Fundamentals Certified (SFC)

📅 2020 📍 Brasília, Brazil

Entrepreneurship: From Idea to Business Conception — Cruzeiro do Sul

📅 2020 📍 São Paulo, Brazil

Educational and Corporate Project Management — UDF

📅 2020 📍 Brasília, Brazil

Oral Production: B2 Level Debates (English) — UnB

📅 2018 📍 Brasília, Brazil

EXPERIENCE

Senior Full-Stack Consultant

SubSurface Dynamics (Contract)

📅 Jan 2023 - Jun 2024

📍 Alberta - Canada

Primary real-time case study: a live operational-monitoring platform for oil & gas frac operations serving **thousands of users**.

- Led the refactor of a MERN stack into a modern **TypeScript** project on **Fastify**, **Socket.io**, and **Redis**, significantly improving architecture and maintainability.
- Scaled real-time delivery with a **Socket.io Redis adapter** for multi-node broadcast and **Bull** worker queues offloading heavy compute; tuned Redis for cost-efficient streaming.
- Leveraged MongoDB Atlas time-series features to cut cost and improve performance; re-engineered the frontend in **React** with reusable, testable components.
- Built live operational dashboards, a notification system, and a **Three.js** 3D wellbore visualization for real-time decisions; secured the platform with Auth0/OAuth2.
- Instituted Git and Continuous Delivery practices across a multidisciplinary team.

Technologies: Fastify, Socket.io, Redis, TypeScript, React, MongoDB Atlas, Three.js, Auth0, OAuth2, Bull, Vite.

Data & DevOps Engineer

Dado Global

📅 Dec 2021 - Apr 2023

📍 Porto - Portugal

- Designed and built a Python **ETL** system with layered responsibilities, using **SQLAlchemy** and rigorous **pytest** coverage of the transform/load layers; **improved SLA from 70% to 95%**.
- Moved manual delivery to **Continuous Delivery** on GitHub Actions (weekly → daily deploys); administered Fedora/Debian on Digital Ocean and on-premise.
- Automated extraction and testing with Behave, Selenium, and Allure reporting.

Technologies: Python, SQLAlchemy, Pytest, Pandas, Flask, Celery, MySQL, GitHub Actions, Docker, Selenium, Behave, Linux.

Researcher (*part-time*)

Ibict — Brazilian Institute of Information in Science and Technology (MCTI)

📅 Mar 2025 - Present

📍 Brasília - Brazil

- Maintain and modernize critical institutional applications and build **data pipelines in GDPR/LGPD compliance**.
- Led a technical audit of a **600K+-user** platform against ISO/IEC 25000 and LGPD, producing a prioritized remediation roadmap that grounded the handover decision.

SOFT SKILLS

Ownership: Takes end-to-end responsibility — challenges ideas, proposes better solutions, and drives them to production rather than executing tickets.

Founder Mindset: Comfortable building from zero, wearing multiple hats, and moving fast without breaking reliability.

Communication: Clear, logical, and proactive collaborator; works closely with founders and non-technical stakeholders.

Mentorship: Grows engineers and sets the standards a team inherits.

Critical Thinking: Analyzes trade-offs and makes decisive, well-reasoned technical calls.

Self-Management: Organized and autonomous; reliable under ambiguity and early-stage pressure.

LOGISTICS & ADDITIONAL EXPERIENCE

Logistics & Operational Systems (Selected)

- **Compuetra** — Built **transport, delivery, and yard-management** software (truck management + logistics), vehicle-inspection and tracking systems, and an ERP desktop platform on **PostgreSQL**, with PCI-compliant checkout.
- **Restaurant Orders Manager (DW Corp)** — Django/Celery synchronization resilient to intermittent restaurant connectivity via the circuit-breaker pattern, delivering to a data lake.
- **Ministry of Health / USP** — Operational software for **medicine distribution across 5,000+ municipalities**, integrating REST APIs and microservices to reduce fraud.
- **Transoft** — Real-time field-service, fleet, and sensor/camera management applications for bus fleets.

Additional Experience

- **ClearSale** — Software Engineer, high-performance anti-fraud microservices; DB views/triggers/procedures with Dapper (C#/.NET). 2021–2022
- **Layers Education** — Backend & microfrontend engineer; MongoDB/BigQuery performance tuning and OWASP hardening. 2022
- **LabTech, UDF** — Technical Lead & Researcher; multi-tier event-management platform (React/Python/Spring Boot, RabbitMQ, Kubernetes); co-advised a legal-domain RAG undergraduate thesis (graded 9.0/10). 2023–2025
- **ConsultMídia / Bank of Brasília** — Full-stack & BPM (Camunda, AngularJS, Spring Boot) for workflow modernization. 2020–2021
- **Joves** — Consultant; agile adoption and back-office integration for an early-stage startup. 2021
- **Taurus Software** — IoT, mobile (Ionic), and lead-capture marketing applications. 2018–2020
- **Gama Cidadão** — Web & Digital Marketing Manager; WordPress/Vue portals and campaigns. 2017–2018
