

Danrley Pereira

AI & Backend Software Engineer — LLM Agents, RAG & ML

danrley.pereira@dwcorp.com.br • +55 61 9 9423-4712 • Brasília, Brazil • LinkedIn • GitHub • danrleypereira.com

SUMMARY

Software engineer since 2017 focused on building **AI-enabled products end to end** — LLM agents, Retrieval-Augmented Generation (RAG) pipelines, and machine learning — on a strong Python, C#/.NET, and Node.js backend foundation. I have shipped AI features to real customers, designed data pipelines and model-training workflows, and founded DW Corp to build reusable product foundations. I own the full path from data and retrieval to backend services and the web interfaces that deliver them.

CORE SKILLS

- **AI / ML:** LLM APIs (OpenAI, Anthropic, Azure OpenAI), RAG & embeddings, FAISS, LangChain / LangGraph, agentic workflows, prompt engineering, TensorFlow / Keras, reinforcement learning.
- **Backend:** Python (FastAPI, Flask, Django), C#/.NET, Node.js, RESTful APIs, event-driven architecture (RabbitMQ), microservices.
- **Data:** PostgreSQL, SQLAlchemy, Snowflake, data pipelines / ETL, Pandas.
- **Cloud & DevOps:** Docker, Kubernetes, AWS, GCP, Azure, CI/CD (GitHub & GitLab), Terraform, on-premise / Linux.

EXPERIENCE

Senior Software Engineer — Epicor

Nov 2023 – Mar 2025

- Integrated **Azure OpenAI** and a **RAG pipeline** over proprietary company data to improve accuracy and customer satisfaction.
- Built .NET Aspire microservices with **RabbitMQ** event-driven processing; used Azure Document Intelligence for structured extraction.

Researcher — Ibict / MCTI (federal government)

Mar 2025 – Present

- Built **Snowflake** data pipelines over institutional data, driving progress toward training ML models on proprietary data.
- Co-advised an undergraduate thesis that designed a **RAG system** for the Brazilian judiciary (graded 9.0/10).

Founder & AI Engineer — DW Corp

Sep 2022 – Present

- Built **LangChain / LangGraph agents** — a WhatsApp budget assistant and an event-driven multi-agent bus — behind a common multi-provider LLM interface.
- Created reusable product foundations (authentication, payments, CI/CD, cloud & on-premise infrastructure).

Personal Project — jackBlack — Deep Reinforcement Learning

2024 – 2025

- Trained a **Deep Q-Network** agent (TensorFlow/Keras) that learns Blackjack by self-play, with GPU training on NVIDIA (CUDA) and AMD (ROCm).

Senior Full-Stack Consultant — SubSurface Dynamics

Jan 2024 – Jun 2024

- Built a real-time operational-monitoring platform (TypeScript, Fastify, **Socket.io + Redis**) serving thousands of users.

Data & DevOps Engineer — Dado Global

Dec 2021 – Apr 2023

- Built a Python ETL system with **SQLAlchemy** and rigorous pytest coverage; improved delivery SLA from 70% to 95%.

EDUCATION

- B.Sc. Software Engineering — University of Brasília
- B.Sc. Computer Science — University Centre of Federal District
- MBA, Supply Chain & Integrated Logistics — Southern Cross University
- MBA, Database Administration — Anhanguera
